Time to take my Uncle's addiction one step further... We gave him a 3-channel simple heli for Christmas of 2009, now let's kick it up a notch of stability and quality with the Blade mCX S300.

The mCX is a Coaxial helicopter – counter rotating blades knock out the torque which makes single rotor helicopters more difficult to fly, at the cost of extreme flight maneuvers. However, it's an EXCELLENT gift to introduce anyone to RC Helicopters.

The video covers the Blade mCX Binding, Flight, and Trim, and introduces the Celectra 4 port charger, sold separately, but great if you have anything requiring the single cell 3.7 V Lipo Batteries. (Those batteries are used in the ParkZone Vapor, Micro Mustang Flyer, mCX, mSR, etc.)

Happy Birthday, Uncle Craig!
